# Abstract

AG(A Game) is based on blockchain technology game + Defi and Web3 0 economic token issued on BNB smart chain. It is committed to creating a completely decentralized, open, transparent, safe and reliable global game ecosystem. Every user in the ecosystem can purchase, obtain and sell Ag tokens in games and applications to dominate Ag tokens. With the continuous consumption of Ag tokens, it will increase its value steadily and make every participant benefit.

AG is a game pass jointly initiated by leading companies in the blockchain game industry from dozens of countries around the world. It will also be the only pass in the blockchain quiz sector in the future AG has a senior game development team with rich experience to bring a more interesting and long-term game experience for game lovers around the world, so that game players can play and earn while playing in Ag gamefi, completely decentralized, fair and open, realize value interconnection, truly win-win and mutually beneficial.

## ✂ Background introduction:

Blockchain refers to a public ledger that is distributed and shareable, trusted through the consensus mechanism and can be checked by each participant. However, no centralized single user can control it. It can only be revised according to strict rules and open protocols. It has the characteristics of decentralization, distrust, timestamp, asymmetric encryption and contract only. Through these characteristics, cryptocurrency is derived from the financial market. Since the encryption bitcoin proposed by Nakamoto on November 1, 2008, it has been developing rapidly and has entered all aspects of the financial market.

The full name of defi is "decentralized finance", which is called open finance. It refers to the decentralized agreement used to build an open financial system, which aims to enable anyone in the world to carry out financial activities anytime, anywhere.

Gamefi is game + defi, that is, a mode of integration of game and finance. Gamefi presents decentralized financial products through games and games the rules of defi. User assets can not only be used as equipment or tools in the game, but also gain benefits and rewards in the process of participating in the game.

Web3. 0 is a concept word created by people in the industry. The most common explanation is that the information in the website can interact directly with the relevant information of other websites, and can integrate and use the information of multiple websites at the same time through a third-party information platform; Users have their own data on the Internet and can use it on different websites; Based entirely on the web, the system functions that can only be realized by complex system programs can be realized by browser. After the user data is audited, it is synchronized with the network data.

## ✂Web3.0 introduction:

### ✂Web3. 0 - decentralized world

In 1990, Tim Berners Lee founded the world wide web. The web, derived from the world wide web (WWW, triple w), is one of the earliest applications on the Internet, It makes it easy for people to browse content.

### ✂Web 1.0

Web 1.0 is powered by conventional computers. Web 1.0 was born in the year when the Internet was just born at the end of the last world

Search engines such as Yahoo and Netscape have come into the public's view.

Web 1.0 adopts one-way information dissemination, that is, static websites. Users can only "see" the information given by the websites

Content does not have the power to revise itself, and the early search engines that adopted web 1.0 relied on users, Users are mostly content consumers rather than content creators. Web 1.0 is open source, Yes, anyone can build it freely. It is also read-only, which means that every 1000 people browsing the web. Only a few users have the technical skills to publish content.

### ✧ Web 2.0

Around 2005, the Internet changed, and new websites such as youtube, Facebook and twitter brought Web 2.0. On these websites, people can create their own web pages. This has promoted the widespread popularity of the web. But while these websites make our online life easier, they are also slowly building on the open web. Build a fence to make us deviate from the original vision of the web. In addition, computers that used to provide computing power for the web are becoming more and more popular. Evolve into a large centralized data center. The subsequent invention of smart phones accelerated this phenomenon. Today, we can Browse the web

through applications such as Safari, Firefox and chrome. At present, Web2.0 is the development of the Internet 0 to Web3.0 era, new stage of development, Web3.0 is also a goal. The world of mind.

### ✧ Web3.0

In Web3.0, the value of the Internet ultimately belongs to users, making everyone's life more convenient and more convenient. Easy. Blockchain technology has become a popular technology because of its characteristics of distributed storage, non-tampering, information encryption, data rights and interests certification and so on. Web3.0 is also the most powerful driving force of Web3.0 is the underlying infrastructure of the world. And pass economy. The emergence of digital assets also allows users to participate in voting and dividends, so as to realize the benign interaction between developers and users.

Move. Users are both users, creators and maintainers. This behavior can be understood as open Data (open data) is an important link in the development of Web 3.0. Web3.0 By building a decentralized, distributed and collaborative ideology, 0 is more User centered, transparent and secure Internet focusing on making things more humanized, computer scientists and Internet experts believe that Web3.0 The change of 0 will make the Internet more intelligent and make people's life easier. Web 3.0 will have many advantages, such

as privacy protection and antitrust, more secure and lasting network services. Data ownership belongs to individuals, with a public blockchain network and a high degree of interoperability. Web3.0 is a new era of Internet development, dominated by distributed technology, with point-to-point network and high interoperability. Workability and high capacity scalability. Web 3.0 will bring a transparent and credible Internet economic model, that is, all things are interconnected without

I'm not here.

### ✧ Web3.0

decentralized social aggregation platform will become a real killer application of blockchain. Since the birth of the Internet, social application has been the most basic and important application form of the Internet. Reference mobile mutual The development of networking, including the rise of mobile social applications such as Facebook, twitter and instagram. Since then, it is a symbolic turning point for the mobile Internet to truly replace the traditional Internet. Since then, the activity of the mobile Internet and The realization potential increases by what level. With the explosive growth of digital currency user groups, this scene will reappear in the blockchain world. The increase of active population, What follows is the social needs of communicating with each other. Digital currency

users urgently need their own communication platform. At the same time, the use of a variety of social applications such as twitter, Telegraph and discord makes the encrypted community very popular It's hard to focus on one platform. This isolation creates huge time and financial costs, leading to community disengagement. At present, there are many encrypted social platforms in the industry, but most of them continue to advocate "resisting censorship" and "speaking out" On "freedom" and "data privacy" do not resonate much with the encryption community. The community can't help asking: have so many similar What's the point of our platform?

### ※ Web3.0

opportunities for decentralized social development

When people talk about their "encryption journey", they are often full of surprises and discoveries because they go deep into the research center, The benefits of the concept of and disruptive technology. But for encryption enthusiasts, it can be dazzling, Because spammers and fraudsters are dangerous to float in space. At the same time, it is difficult for individuals and project teams to become opinion leaders, and their social accounts are difficult to attract a large number of fans or users It stands out in thousands of communities, and the current social media platform does not

specifically target cryptocurrency people. The real native encryption and NFT dedicated social media platform, with high-density fans, has not yet been born. Although there are more than More than 100 million wallet addresses, and the number of cryptocurrency and NFT lovers is increasing every day. Why No dedicated public opinion forums and social media platforms for encrypted communities? What's worse, because the interface of traditional social platforms greatly limits the expansion of platform features and functions, it is not true

Time message, custom expression integration, etc. Because the interaction between users is greatly ignored, these platforms cannot provide Practical community construction work. The fact that there are no clear winners in encrypted social media means that the existing platforms cannot attract the global cryptocurrency society Area of interest. Reflecting on the mistakes of these platforms, stem found that one factor of interest to cryptocurrency users is Canada Secret currency and blockchain technology. Based on this discovery, Ag positioned itself as the first to advocate the concept of decentralized encryption digital technology Decentralized social aggregation application platform. By concentrating the interests of the community, Ag can form an encryption Community base dominated by currency users. With the expansion of the community,

the strong self-interest network effect will attract more encrypted goods

Coin users and projects join the public chain network to build encrypted social network applications. AG also abandoned the traditional blog Interface method, focusing on building a new interface architecture with better functional scalability. With more and more users and When the project joins the network, Ag will gradually surpass and become a rapidly growing and scalable decentralized aggregation social network Public chain network, becoming the next generation Web3 0 is the leader of the socialfi track.

From 2016 to 2022, the scale of the global game market continued to grow. In 2021, the scale of the global game market reached more than 1000 D billion US dollars, an increase of about 7.2% over 2020. Among them, financial games such as quiz reached more than 10 billion US dollars, accounting for 1 / 10. Traditional centralized games can not guarantee the security of user accounts, and the accounts do not completely belong to users themselves. We hope to decentralize quiz games through blockchain technology, Let users have absolute control over assets, be safe and reliable, and benefit from them.

## ※AG(A Game) introduce:

※GameFi+WEB3. 0 global decentralized game ecological platform

Main functions:

- decentralized currency, users can purchase Ag tokens on BSC and have the absolute right to use the tokens
- support usdt stable currency to participate in the game, and Ag ecology supports users through Ag or A-Usdt stable coin participates in the guessing game in the ecology
- decentralized game. Ag game ecology is deployed on BNB smart chain, with complete decentralization
- fair launch and stable appreciation. Ag tokens ensure stable destruction through its economic model, so as to promote the continuous appreciation of Ag tokens and allow each Ag token holder to receive them benefit

## How play guessing game:

- The way to participate in the quiz game is to first buy Ag in pancakes and exchange it into stable currency in DAPP for participation. Users can use Ag or ausdt to participate in entertainment games in the quiz pool to get more AG
- The structure of entertainment game is BTC market guessing. For example, according to coin security, BTC / usdt, there are minute line, 5-minute line, hour line and daily line. Each line has a closing price. The price of bitcoin is two decimal places. For

example, the closing price of the current line is 44003.21, then take the sum of 321 as 6, the minimum is  $0 + 0 + 0 = 0$ , and the maximum is  $9 + 9 + 9 = 27$ , that is, 36 results in total

- Each result will have a corresponding NFT. Participating in the quiz needs to consume Ag or ausdt to buy the corresponding NFT. If the guess result is the same as the choice, you can get a certain proportion of Ag or ausdt as a reward.

The early opening refers to the K-line data of currency security, the world's largest exchange. The data is open and fair, providing a good and fair environment for guessing players. The world cup and the European Cup have been opened one after another. With the enthusiastic participation of quiz lovers. The market demand of Ag will continue to increase, which will drive the price of Ag tokens to continue to rise steadily.

## ※AG(A Game) distribute

Issuing public chain: binance smart chain

The total quantity of hair styles is 20 million

5% 1 million community crowdfunding

1.5% 300000 pieces added to the flow pool

2% 400000 technology team foundation

1.5% 300000 airdrops decided by community Dao organizations

90% of 18 million eco games

Private placement of 0.5u one token, with a total of 1 million tokens,  
locked and released

25% before launch and 15% every month

AG transaction fee: 4% for buying and selling

Among them, 1% will be distributed as LP handling fee and 1% will  
be destroyed

2% return to LP tank

**AG**

**Total supply:2000W**

- Game 90%
- Liquidity 1.5%
- Private placement 5%
- Technical team 2%
- Airdrop 1.5%

## ✂AG development roadmap:

- Issue tokens on the official website
- Private placement (recruit 100 communities to jointly promote game Ecology)
- Online advertising of overseas V platforms at home and abroad
- Launch pancakeswap Bo cake exchange
- Online game ecosystem and game consumption pass
- Online football and other guessing games

AG has a senior game development team with rich experience to bring a more interesting and long-term game experience for game lovers around the world, so that game players can play and earn while playing in Ag gamefi, completely decentralized, fair and open, realize value interconnection, truly win-win and mutually beneficial.

## ✂Risk warning

AG will be according to the content that is disclosed, the standard management project and try our best to push the project run normally, but in this process may face policy risk, transaction risk and overall risk, technology risk, security risk, and other unpredictable risks, so the foundation and related technology service company not to make any guarantee future earnings, Please make your participation choice carefully after fully understanding the project.

## ✂disclaimer

This document is for informational purposes only and does not constitute advice, solicitation or solicitation of any investment in or sale of stock or securities in AG or its affiliates. Such solicitation must be made in the form of a confidential memorandum and must comply with relevant securities and other laws.

The contents of this document shall not be construed as forcing participation in the PUBLIC offering of AG-related tokens. Any action in connection with this White Paper shall not be deemed to be particip

ation in the public offering of AG-related tokens, including requesting a copy of this white paper or sharing this white paper with others.

Participation in the PUBLIC offering of AG-related tokens represents that the participant has reached the age standard and has full civil capacity. All participants are voluntary and have previously had a clear and necessary understanding of ag-related tokens.

Ag-related tokens, as official tokens, are an important tool for platform generation efficiency and are not investment products. Ownership of AG-related tokens does not confer ownership, control or decision-making rights over the platform on its owners

The value increment of AG-related tokens depends on the market rules and the demand after the application is implemented. They may not have any value. The Team makes no commitment to their value increment and shall not be responsible for the consequences caused by their value increase or decrease. To the maximum extent permitted by applicable law, the Team shall not be liable for damages and risks arising out of its participation in the PUBLIC offering of AG-related tokens, including, but not limited to, direct or indirect personal damages, loss of business profits, loss of business information or any other economic losses.

AG complies with any regulatory regulations and industry self-regulatory statements that are conducive to the healthy development of the industry. By participating, participants will fully accept and comply with such inspections. At the same time, all information disclosed by participants to complete such checks must be complete and accurate. The Platform clearly conveys the possible risks to participants. Once participants participate in the PUBLIC offering of AG-related tokens, it means that they have confirmed their understanding and acceptance of the terms and conditions in the Rules, and accept the potential risks of the Platform, and bear the consequences themselves.
